Definition of norm

Relations

Lemma 0.1. Given 2 matrices A, B,

$$|\langle \boldsymbol{A}, \boldsymbol{B} \rangle| \leq \|\boldsymbol{A}\|_{\sigma} \boldsymbol{B}_{*}$$

where $\|A\|_{\sigma}$, $\|B\|_{*}$ are spectral norm and nuclear norm.

Lemma 0.2. Given matrix X,

$$\left\| \boldsymbol{X} \right\|_* \leq \sqrt{\mathit{rank}(\boldsymbol{X})} \left\| \boldsymbol{X} \right\|_{\mathrm{F}}$$

From this

Lemma 0.3. Given matrix X,

$$\|oldsymbol{X}\|_{ ext{F}} = \sqrt{\sum_{i=1} \sigma_i},$$

where σ_i is the ith singular value of X.

Lemma 0.4.

$$\|\boldsymbol{A}\boldsymbol{B}\|_{\mathrm{F}} \leq \sigma_{\mathrm{max}}(\boldsymbol{A}) \|\boldsymbol{B}\|_{\mathrm{F}}$$

Lemma 0.5.

$$\|\boldsymbol{A}\boldsymbol{B}\|_{\mathrm{F}} \leq \sigma_{\mathrm{max}}(\boldsymbol{A}) \|\boldsymbol{B}\|_{\mathrm{F}}$$
